

Jothi Tutor Development Standards

TUTOR LESSON REFLECTION STANDARD

The standard for structured post-lesson reflection within the Johti Tutor Academy

Author	Prakash Micheal — Johti Learning, United Kingdom
Document ID	JTD02 — Version 2.0
Publication Date	April 2026
Status	Current — supersedes JTD02 v1.0 (March 2026)
Intended Audience	Tutors and mentors within the Johti Tutor Academy
Related Documents	JTD01 v2.0, JTD03 v2.0, JTD04 v2.0, JTD05, JF03 v2.0

1. Purpose

This document defines the lesson reflection standard for the Johti Tutor Academy. It tells tutors what to reflect on and how to do it usefully. It tells mentors what to look for when reviewing reflections.

Reflection is the Reflect step in the Plan–Teach–Reflect–Improve loop. Without it, tutors repeat the same lesson with no intentional change. The JTD02 form exists to make that loop structured and fast — not to create administrative load.

Target completion time: 6 minutes or less.

2. When to Reflect

- After every lesson where the tutor has played an active developmental role — observation, co-teaching, lead teaching, or independent teaching.
- Complete the form on the same day as the lesson, ideally immediately after. Lesson detail fades within hours. A reflection written the next day is a reconstruction.
- Do not complete a reflection for a lesson where the tutor was entirely passive. If the tutor observed without a structured 4T focus, that should be captured as a mentor discussion note, not a JTD02 record.

3. What Good Reflection Does

Good reflection is specific, honest, and forward-pointing. It produces one clear next-step target. A reflection that generates a list of five improvements, or describes the lesson without analysing the teaching, has not done its job.

Strong Reflection	Weak Reflection
Describes a specific moment and what it revealed about teaching	Describes the topic taught and says the lesson went well
Identifies one clear behaviour to change next time	Lists four or five things that could be better
Notes what the student's confusion revealed about the teaching	Notes that the student was confused without analysing why
Names the competency being worked on with specific evidence	Gives a high confidence rating without any supporting evidence
Is honest when something did not work	Is vague or defensive about teaching that clearly failed

4. JTD02 Form — Structure and Quality Expectations

The form has six sections. Each section should take approximately one minute to complete if the tutor has been paying attention during the lesson.

#	Section	Fields	Quality Expectation
1	Lesson Information	Tutor name, lesson role, date, subject, year group, lesson topic, student name or group code	Complete and accurate. Lesson role must match reality — do not record Lead Teaching if the actual role was co-teaching.
2	4T Self-Rating	Rate each of Teach, Test, Track, Transform on a 1–5 scale.	Ratings must reflect actual lesson behaviour, not aspiration. A tutor who did not ask a single diagnostic question should not rate Test above 2.
3	JCT1 Self-Rating	Rate all 7 JCT1 competencies on a 1–5 scale.	Must be honest. The purpose of self-rating is to surface gaps, not to record high scores. Ratings that consistently diverge from mentor observations are a coaching conversation.
4	4T Reflection	Teach: what was explained and how. Test: what question checked understanding. Track: what was noticed about student thinking. Transform: how misunderstanding was addressed.	1–2 sentences per field. Specific — name the concept, the question, the error, the correction. Not a lesson summary.
5	Competency Focus	Which competency (A-F code) was the main focus? Rate 1–5. What evidence from the lesson shows this?	One competency per reflection. Evidence must be a specific moment from the lesson — not a general claim. This feeds the JTD05 dashboard.
6	Next Step	One teaching move to try next lesson. Confidence rating 1–5. What support is wanted from the mentor?	The next-step target must be specific enough to attempt in the very next lesson. 'Improve questioning' is not a target. 'Ask why after every worked example before moving on' is.

5. The Next-Step Target — The Most Important Field

The next-step target is the most important output of the reflection. Everything else in the form supports it. The target drives the Plan step in the next PDCA cycle.

Weak Target	Strong Target
Improve my questioning	After each worked example, ask what would change if this value were negative — before moving to the next question.
Be more structured	Write the three steps on the board before starting the explanation and point to each step as I reach it.
Check understanding better	Before moving from explanation to practice, ask the student to explain the method back to me without looking at the board.
Work on misconceptions	When the student makes an error, ask them to tell me what they were thinking before I correct it.

The mentor checks at the start of the next observation whether the target was acted on. If it was not, that is a coaching conversation — not something to overlook.

6. How Mentors Use Reflection Records

Mentors should read the tutor's JTD02 form before every observation and debrief. It tells the mentor what the tutor thinks is going well, what they think needs improving, and whether the improvement target from the previous lesson was carried forward.

When Self-Perception and Observation Diverge

A consistent gap between tutor self-ratings and mentor observation ratings is one of the most useful development signals in the system. It means one of three things:

- The tutor is over-rating — common early in the residency, linked to lack of awareness of what the standard actually looks like.
- The tutor is under-rating — less common, often linked to confidence rather than actual teaching quality.
- The mentor's observation focus was different from the tutor's reflection focus — in which case the debrief should clarify what each was watching.

All three require a direct conversation. None should be left to resolve themselves.

7. Reflection and the JTD05 Dashboard

The competency and evidence fields in the JTD02 form feed the JTD05 dashboard. Every time a tutor names a competency and rates their performance, that data contributes to the competency coverage picture that the mentor panel reviews.

Self-reported competency ratings are flagged as tutor self-assessment in the dashboard — they do not carry the same weight as mentor-observed sign-offs. But a consistent pattern of high self-

assessment against a competency that has never been mentor-observed is a useful flag for the panel to investigate.

8. Common Reflection Errors

Error	Why It Matters
Describing the lesson instead of analysing the teaching	'We covered quadratic factorisation and the student did three questions' is a lesson summary, not a reflection. The form asks what the tutor noticed about teaching and learning.
Rating everything 4 or 5	Uniformly high self-ratings that do not match mentor observations destroy the value of the self-assessment data. They signal the tutor is completing the form to finish it, not to learn from it.
Writing a vague next-step target	A vague target cannot be acted on. It will not appear in the next plan. It will not drive any change. It is a placeholder, not a development tool.
Completing the form the day after the lesson	The specific moments that make a reflection useful — the exact question asked, the student's hesitation, the correction that did not land — fade within hours.
Treating the form as an administrative requirement	A form completed quickly to get it done produces no developmental value. If a tutor is doing this, the mentor needs to address it directly.

9. Version Notes — Changes from v1.0

Change	Reason
Form structure mapped with quality expectations per section	v1.0 described what each section should include but did not state what quality looks like. v2.0 adds quality expectations for each form field.
Next-step target section expanded with strong/weak examples	The next-step target is the most important output of the form. v2.0 gives direct examples of what makes a target usable versus useless.
Divergence between self-rating and observation addressed	v1.0 noted that reflection and observation might differ without explaining what to do. v2.0 names the three causes and states all three require a direct conversation.
JTD05 dashboard link explained	New in v2.0. Tutors should understand that their reflection data feeds the evidence dashboard the mentor panel reviews.
Competency references updated to A-F codes	All references now use the A-F taxonomy from JTD01 v2.0.
Significant volume reduction	v1.0 was 10 pages. v2.0 removes repeated framing, restated principles, and narrative padding. The operational content is the same; the word count is not.
