Jothi Teaching Standards

Jothi Assessment and Progress Monitoring Standard

Operational standard for using assessment to reveal understanding, guide teaching, and monitor academic progress

Author
Prakash Micheal
Jothi Learning, United Kingdom

Publication date
March 2026

Document ID
JTS03 - 1.0

Purpose of the Document

This document defines the standard for assessment and progress monitoring within the Jothi Tutor Academy. Its purpose is to ensure that assessment is used not merely to record scores, but to reveal student understanding, identify misconceptions, guide instructional decisions, and monitor progress over time.

Within the Jothi teaching model, assessment is part of teaching. It is one of the main ways tutors discover what the student understands, where understanding is weak, and what should happen next. This standard therefore exists to ensure that assessment remains diagnostic, meaningful, and closely connected to lesson practice.

Intended Audience

This document is intended for:

- tutors delivering lessons and assessments within Jothi Learning
- mentors reviewing how tutors use evidence of student understanding
- academy leadership overseeing instructional quality and academic progress systems

1. Role of Assessment in the Jothi Teaching Model

Assessment at Jothi is not separate from teaching. It is part of how teaching becomes responsive.

Assessment helps the tutor to:

- test whether explanation has led to understanding
- track how the student is reasoning across tasks
- identify misconceptions and weak areas
- decide what requires reteaching, reinforcement, or progression
- build an accurate picture of long-term student development

For this reason, assessment should not be treated as an occasional administrative event. It should be built into the teaching process itself.

2. Relationship to the 4T Teaching Engine

Assessment plays a direct role in the 4T Teaching Engine.

Teach

Assessment helps the tutor judge whether the concept explanation has been understood as intended.

Test

Assessment is one of the clearest ways to check understanding through questions, tasks, or short written responses.

Track

Assessment helps the tutor observe patterns in student performance, reasoning, and recurring difficulty.

Transform

Assessment evidence helps the tutor decide what misconception needs to be corrected and how future teaching should be adjusted.

This means assessment should not only produce a result. It should produce usable evidence.

3. Principles of Strong Assessment Practice

Assessment at Jothi should be:

- diagnostic
- proportionate
- meaningful
- closely linked to recent teaching
- useful for future lesson planning

Strong assessment practice does not overload students with unnecessary testing. It uses the right type of assessment at the right time for the purpose of improving learning.

4. Types of Assessment Used at Jothi

4.1 Diagnostic Questioning

Diagnostic questioning takes place within lessons. It is used to reveal how the student is thinking during or immediately after explanation.

Examples include:

- asking the student to explain a step
- asking what changes under different conditions
- asking the student to identify an error
- asking for justification rather than only an answer

This is the most immediate and frequent form of assessment.

4.2 Short Lesson Tasks

Short written or verbal tasks may be used during lessons to check whether the student can apply the concept independently or semi-independently.

These tasks help the tutor move from explanation into visible evidence of understanding.

4.3 Topic Tests

Topic tests are used after a block of learning to check whether the student has developed secure understanding of the topic.

A topic test should do more than reward memory of the most recent example. It should reveal whether the student can:

- apply the concept independently
- explain reasoning where appropriate
- avoid predictable misconceptions
- handle slight variation in the task

4.4 Cumulative Assessment

Cumulative assessment revisits earlier content so that progress is not judged only on what was taught most recently.

This matters because students may appear secure immediately after teaching while still forgetting or misapplying the same content later.

4.5 Exam-Style Assessment

Where relevant, tutors may use exam-style tasks to develop written precision, question interpretation, time discipline, and structured problem solving.

These assessments are useful, but they should not replace diagnostic teaching. Exam practice is strongest when it sits on top of real understanding.

5. What Tutors Should Look For in Assessment

Tutors should use assessment to identify not only whether the answer is correct, but what that answer reveals about the student’s thinking.

Important indicators include:

- whether the student can explain the method
- whether reasoning is secure or copied mechanically
- whether errors are random or patterned
- whether the student can transfer understanding to a new example
- whether confidence matches actual performance
- whether misunderstanding is conceptual, procedural, or attentional

This deeper reading of assessment is essential to strong teaching.

6. Progress Monitoring Over Time

Progress monitoring should be continuous rather than occasional. Tutors should build a picture of development over time by noticing:

- recurring misconceptions
- topics that remain insecure
- topics that have become secure
- changes in confidence and independence
- improvement in explanation and reasoning
- readiness to move to more demanding material

Progress is not simply the accumulation of completed topics. It is the growth of reliable understanding.

7. Using Assessment Evidence to Guide Teaching

Assessment should directly influence lesson planning and instructional choices.

Evidence from assessment may lead the tutor to:

- reteach a concept
- slow down lesson pace
- provide more structured practice
- ask better diagnostic questions
- revisit prior knowledge
- increase difficulty only when understanding is secure

The key principle is simple: assessment should change teaching when the evidence requires it.

8. Mastery and Readiness to Move Forward

Students should not move on merely because content has been covered or because one answer was correct.

A student is more likely to be ready to move forward when they can:

- apply the concept independently
- explain the reasoning clearly
- complete related questions without heavy prompting
- recognise or avoid common misconceptions
- maintain understanding across variation in the task

This does not mean waiting for perfection. It means looking for sufficient security before advancing.

9. Feedback to Students

Assessment should lead to feedback that helps the student improve.

Effective feedback should:

- identify what was understood correctly
- explain what is weak or incorrect

- show why the error matters
- guide the student toward a stronger method or explanation
- make the next step for improvement clear

Feedback should support learning, not simply label performance.

10. Relationship to Parent Communication

Assessment evidence is one of the main foundations of effective parent communication.

When tutors communicate progress to parents, updates should where appropriate be informed by:

- recent test performance
- patterns in understanding
- areas that are secure
- areas needing more work
- the student's readiness for progression

This helps parent communication remain grounded in evidence rather than vague impression.

11. Common Assessment Errors

The following practices weaken the quality of assessment and should be avoided:

- treating marks as more important than understanding
- moving on after a correct answer without checking reasoning
- using only one type of assessment repeatedly
- giving tests that do not match what was taught
- focusing on task completion more than diagnostic value
- recording performance without using it to change teaching
- assuming that recent success means durable understanding

These errors make assessment look organised while reducing its instructional value.

12. Mentor Observation Focus

When reviewing tutor practice, mentors should look for evidence that the tutor:

- uses diagnostic questioning regularly
- interprets student responses thoughtfully
- notices patterns in misunderstanding
- uses assessment evidence to adjust teaching
- keeps assessment connected to learning rather than treating it as an add-on

Mentors should also consider whether the tutor distinguishes between surface success and genuine understanding.

13. Relationship to the Wider JTA System

This standard supports the wider JTA system by defining how tutors gather and interpret evidence of student learning.

It is closely linked to:

- JTS01, because lesson delivery should include diagnostic checking
- JTS04, because parent communication should be informed by learning evidence
- JTD04, because mentor observation should examine how tutors use assessment within lessons

Assessment is therefore not an isolated process. It is part of how teaching quality, student progress, and tutor development are maintained across the academy.

14. Conclusion

Assessment and progress monitoring at Jothi are intended to strengthen teaching, not merely document performance. Tutors are expected to use assessment to reveal student thinking, identify misconception, and guide next instructional steps with accuracy and care.

This standard exists to ensure that assessment remains a live part of the teaching process and that progress is judged by real understanding rather than surface completion.
