LESSON DELIVERY STANDARD

Operational standard for delivering lessons using the 4T Teaching Engine

Author	Prakash Micheal — Johti Learning, United Kingdom
Document ID	JTS01 — Version 2.0
Publication Date	April 2026
Status	Current — supersedes JTS01 v1.0 (March 2026)
Intended Audience	Tutors, mentors, and academy leadership
Related Documents	JF03 v2.0, JTS02 v2.0, JTS03 v2.0, JTD01 v2.0, JTD04 v2.0

1. Purpose

This standard defines what good Johti lesson delivery looks like in practice. It translates the 4T Teaching Engine (JF03 v2.0) into observable tutor behaviour. Every tutor is expected to deliver to this standard. Every mentor uses it as the observation baseline.

This standard does not restate the 4T model. Read JF03 v2.0 for that. This document specifies what each teaching phase must look like in a live lesson — and what it must not look like.

2. The Lesson Delivery Standard at a Glance

Phase	Required Behaviour	Not Acceptable	Key Competencies
Teach	- Explain concepts in logically sequenced steps - Show the reasoning behind each step — not just the result - Use the board to make thinking visible at the pace the student can follow - Use examples that expose why a method works, not only how	- Jumping steps and expecting students to infer missing reasoning - Reading from slides without live working - Pacing explanation to content coverage rather than student understanding	A1, B2, C1

Phase	Required Behaviour	Not Acceptable	Key Competencies
Test	- Ask questions that require explanation, justification, or prediction - Use the student's answer to decide what to do next - Probe reasoning even when the answer is correct	- Accepting 'yes' or 'I understand' as evidence of understanding - Asking only recall questions - Moving on after a correct answer without checking the reasoning	C2, C3
Track	- Observe written work, hesitation, and error patterns — not just final answers - Distinguish between guessing and reasoning - Use Classkick or board work to make student thinking visible	- Monitoring only whether the student got the answer right - Missing hesitation that precedes a lucky correct answer - Letting students remain passive for extended stretches	C3, C4, D1
Transform	- Identify the source of the error, not just the error itself - Rebuild the reasoning — do not just supply the correct answer - Ask the student to articulate the corrected idea - Re-check understanding after correction	- Giving the correct answer and moving on - Correcting the symptom while leaving the misconception in place - Assuming one correction has resolved the issue	A2, C4, C5

3. Standard Lesson Flow

While exact structure varies by topic and student, a strong Johti lesson includes the following elements in a coherent order:

Element	What It Involves
School context check	Confirm what the student's school is currently covering and whether any tests are coming up. Lesson content should be informed by this. (A4)
Retrieval or prior knowledge review	Begin with a brief check of what the student remembers from the previous lesson. Do not assume retention. (C2, D1)
Concept introduction	Introduce the lesson focus clearly. The student should know what they are learning and why it connects to what came before. (B2, C1)
Explanation with visible reasoning	Teach the concept step by step with board work that shows the reasoning. The 4T cycle begins here. (A1, C1)
Diagnostic questioning	Check understanding through questions that reveal reasoning — not just whether the answer is right. (C2, C3)
Guided practice	Student works through problems under tutor observation. Tutor monitors thinking and intervenes with questions, not answers. (C4)

Element	What It Involves
Misconception correction	Address errors as they appear. Target the cause. Rebuild understanding, do not patch it. (A2, C5)
Movement toward independence	Reduce scaffolding as understanding strengthens. The student should be doing more of the cognitive work as the lesson progresses. (C4)
Review or consolidation	Close the lesson with a brief summary of what was covered and what is secure. Identify what needs revisiting next time. (D1)

4. Core Tutor Behaviour Expectations

These behaviours must be present in every lesson, regardless of topic, year group, or student level.

Behaviour	What It Requires
Explain with clarity	Break every explanation into steps the student can follow. Show reasoning, not just results. Never assume a step is obvious.
Ask purposeful questions	Questions should uncover what the student is thinking, not fill silence or confirm surface understanding.
Listen and observe actively	Pay close attention to what the student says, writes, hesitates over, and attempts — not just their final answer.
Respond to misunderstanding	Treat every error as diagnostic information. Respond with targeted teaching — not a mark, not a hint, not the answer.
Keep the student intellectually active	Students should be thinking, writing, or explaining — not watching passively for extended periods.
Maintain professional conduct	Stay focused, composed, and learning-centred throughout. Technical setup is ready. Lesson begins on time. (F2)

5. Subject-Specific Expectations

The following apply across Mathematics, Physics, and Chemistry. They sit beneath the universal lesson delivery standard, not above it.

Subject	Additional Expectations
Mathematics	Show algebraic steps without collapsing transformations. Use layout to separate methods and cases. Make diagrams, graphs, and constructions readable. Check that procedural fluency is grounded in conceptual understanding — not just memorised method.
Physics	Show formulae clearly. Make units visible at every step. Model substitution step by step. Separate known values, formulae, and working. Use diagrams where they genuinely clarify — not as decoration.
Chemistry	Write equations clearly and accurately. Keep notation readable. Model balancing and structural representation step by step. Make relationships between particles, equations, and quantities explicit.

6. What Mentors Observe

When observing lesson delivery, mentors look for evidence across all four 4T phases. The JTD04 form structures this. The core questions for each phase are:

- **Teach:** Was the explanation logically sequenced? Was reasoning visible? Was the pace manageable?
- **Test:** Did questions reveal reasoning, or only correct answers? Were vague confirmation questions avoided?
- **Track:** Did the tutor notice hesitation, error patterns, or guessing? Was student thinking made visible?
- **Transform:** Was the misconception's source identified? Was the correction targeted and re-checked?

A lesson that covers all four phases well — consistently, across multiple cycles — is a Johti-standard lesson.

7. Common Lesson Delivery Errors

Error	Why It Matters
Explaining for too long without checking	Produces the illusion of teaching. The student may follow the words without building understanding.
Asking only surface questions	Correct answers to low-level questions mask fragile or absent understanding.
Correcting without explaining the misconception	The student gets the right answer but still holds the wrong idea. The misconception resurfaces on the next problem.
Rushing to cover content	Coverage is not learning. A topic completed at surface level produces no durable understanding.
Allowing passive stretches	Students who are not actively thinking are not learning. Long periods of tutor monologue break the engagement the 4T cycle is designed to maintain.
Moving on before understanding is secure	Weak foundations make everything that follows harder. Slow down when the evidence says to slow down.

8. Version Notes — Changes from v1.0

Change	Reason
4T phase requirements presented as a table with required/not acceptable columns	v1.0 described each phase in prose. The table is faster to use as a reference during lesson preparation and mentor observation.
Standard lesson flow presented as a table with competency codes	v1.0 listed lesson elements as bullet points without linking them to competencies. v2.0 connects each element to its A-F code.
Subject-specific expectations consolidated into one table	v1.0 distributed subject-specific guidance across multiple sections. v2.0 puts it in one table for quick reference.

Change	Reason
4T model description removed	v1.0 restated the full 4T model. v2.0 references JF03 v2.0 and gets straight to the delivery standard.
Common errors table added	New in v2.0. Gives tutors and mentors a direct reference for the most frequent lesson quality failures.
